PROGRAM OF STUDIES IN MARINE & ENVIRONMENTAL AFFAIRS
FOR STUDENTS ENTERING AUTUMN 2019

The School of Marine & Environmental Affairs fosters comprehensive, long term and proactive approaches to marine and environmental policy and management.

I. Introduction

The Master of Marine Affairs (M.M.A.) degree is granted by the School of Marine & Environmental Affairs, an academic and research unit of the College of the Environment. The M.M.A. degree program is a two-year graduate course of studies requiring the completion of 59 credits. The M.M.A. is designed to familiarize students with a diversity of conceptual and methodological approaches and fields of inquiry in Marine and Environmental Affairs. The thematic focus of the marine affairs graduate curriculum is Human Dimensions of Global Change in the Marine Environment (HDGCMCE).

The SMEA offers two tracks—a professional track and a thesis track—for completing the Master of Marine Affairs degree, depending on the student’s interests and career plans. Both tracks require completion of the core curriculum and a minimum of 59 credits. Students select their track by December 13th of their first year.

Professional Track

Students in the professional track have two options: they can meet the requirements with course work only or complete a team capstone project in addition to course work.

- Students with specific career needs and goals, such as those already established in careers or those intending to change careers, are among those likely to benefit from the courses-only track. Under this option, all 59 credits are accrued through coursework. Students wanting to pursue the courses-only track should work with their faculty advisor to develop a detailed plan of coursework to submit on or before the Friday of finals week in winter quarter of the first year.
- Students interested in working in a team to address a specific, client-oriented policy or management problem may choose to engage in a capstone project. The capstone project and presentation account for nine of the 59 credits required for graduation. Projects are advertised to students on November 15th of the first year and students have the opportunity to sign up for the capstone option by December 13th. Students pursuing a concurrent degree in another UW graduate school/program that prolongs their time-to-graduation and prevents them from engaging in a capstone project in their second year should indicate in writing to the Graduate Program Advisor by December 13th that they would like to delay their track selection decision until December 13th of their second year.
Thesis Track

Students in the thesis track are expected to prepare and submit a master’s thesis that meets the academic and professional standards of the School. A manuscript suitable for submission to a peer reviewed journal or an equivalent product meets these standards. Fifteen credits of the 59 required for graduation are devoted to thesis research and presentation. The thesis track requires submission of a brief description of the thesis project and the name of the thesis chair by December 13th of the first year. Thesis-track students are required to submit a thesis prospectus and nominate their thesis committee by the last day of winter quarter. Submission of the complete prospectus will allow the student access to enroll in SMEA 700 credits.

Track Changes

In the event students need to change the track/option subsequent to the December 13th deadline, they can request a track/option change at the latest 3 quarters prior to graduation. For example, students wanting to graduate in spring quarter of their second year will need to submit a track/option change request to the SMEA Director at the latest, by the end of week 1 of the autumn quarter in their second year (students planning a winter graduation must submit their petition by the end of week 1 of the summer term). The petition has to be approved by the first year/thesis advisor first. To submit a track/option change request, email your request as well as a justification signed by both you and your first year/thesis advisor (with your advisor cc’ed) to the SMEA Director and Graduate Program Advisor.

Continuing students, students on leave, or students who have withdrawn from the program are expected to return to the program in the same track from which they departed. That is, students in the thesis track return in the thesis track, and students in the professional track return in that track. A student in the thesis track may not use the professional track option to avoid completion of the thesis requirement.

The required credits are distributed among the following topics:

A. The Core Curriculum  This typically consists of 29 credits for the professional track and 32 credits for the thesis track:

<table>
<thead>
<tr>
<th>Core Requirement</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Introduction to The Human Dimensions of Global Change: SMEA 500</td>
<td>3</td>
</tr>
<tr>
<td>Decision Making &amp; Action Taking in Marine Affairs: SMEA502</td>
<td>3</td>
</tr>
<tr>
<td>Environmental Equity &amp; Justice</td>
<td>3</td>
</tr>
<tr>
<td>Marine Law</td>
<td>3</td>
</tr>
<tr>
<td>Policy Analysis</td>
<td>3</td>
</tr>
<tr>
<td>Economics</td>
<td>3-4</td>
</tr>
<tr>
<td>National or International Policy Processes</td>
<td>3</td>
</tr>
<tr>
<td>Marine Science</td>
<td>3</td>
</tr>
<tr>
<td>Research Methods</td>
<td>3 for professional track; 6 for thesis track</td>
</tr>
<tr>
<td>First Year Advising</td>
<td>2</td>
</tr>
</tbody>
</table>
B. Electives  Students must take at least the number of electives required to bring the total number of credits to 59. Typically, this means about 30 credits for the courses-only track, 20 credits for the professional track, and 12 credits for the thesis-track students. SMEA 600B (Advising) does not satisfy the elective requirement.

C. Capstone/Thesis

Capstone Project and Presentation The capstone project and presentation account for 9 credits and are required for students in the professional track who choose the capstone option.

Thesis and Thesis Presentation The thesis and presentation account for 15 credits and are required for thesis track students.

Note: If more than the required number of courses is taken from the Core Curriculum, the surplus credits may count towards elective credits, reducing the number of elective credits required. In any case, the total credits to graduate must be at least 59.

Details of course requirements are discussed in Section III.

II. Progress towards the M.M.A. Degree

The first year of study is devoted to developing a comprehensive understanding of marine and environmental affairs including how the HDGCME constructs apply to the field, as well as strengthening analytical skills, demonstrated by making substantial progress toward the completion of the core course requirements and electives.

During the second year of study, students are expected to develop competence in a particular aspect of marine and environmental affairs through additional course work, preparation of the thesis, or completion of the capstone project.

Advising and expected timeline for completion of requirements

SMEA faculty advise students throughout their studies to build a rigorous course of study and to ensure progress towards completion of the degree.

During the first year of study, the faculty advisor assists students in course selection, in preparation of the plan for additional course work or capstone selection (professional track students), or in exploration of potential thesis topics and identification of a potential thesis advisor (thesis-track students). Faculty are expected to meet with their advisees on a regular basis. It is the shared responsibility of students and advisors to ensure that regular meetings are held and that the advising needs of the students are met. Advising in the first quarter of the program is intended to orient students to the SMEA program and select a track.

Policies to guide advising and course selection:

1) At the start of fall quarter, student and advisor develop a course plan for the first year. This plan is recorded on the Degree Progress Report form and approved by the faculty advisor (with the understanding that course availability and academic priorities can change as a student’s
The course plan reflects SMEA course requirements, academic needs, professional development, course availability, and student interest.

2) Student and advisor review (and if needed revise) the above plan every quarter in light of academic needs and/or changes in course offerings.

Students are required to register for one credit of advising (SMEA 600B) during each of autumn and winter quarters of their first academic year. One independent study credit is consistent with an expectation that students will engage in three hours per week of work in relation to this requirement, including meeting with their faculty advisors an average of one hour/week during each quarter for which they are so registered.

The primary purpose of autumn quarter advising is to determine the most appropriate track and option for each student. By December 13th, students will select a specific track and option. See Section D of this Program of Studies for requirements for the professional track and Section E of this Program of Studies for requirements for the thesis track.

The primary purpose of winter quarter advising is detailed specification for completion of the degree requirements in the selected track and option. (Once again, see Section D of this Program of Studies for requirements for the professional track and Section E of this Program of Studies for the requirement for the thesis track). At this time, students must select a faculty advisor who guides their academic development and progress. Students selecting the courses-only track may wish to continue working with their assigned advisor in the second quarter and beyond, but this is not required. Students selecting a capstone project will be advised by the faculty capstone advisor after opting into a specific capstone. The thesis committee chair serves as the faculty advisor for thesis-track students.

While most students will register for SMEA 600B with their first year advisor, thesis and capstone students may, with approval, register for winter quarter with their second year advisor. Students, especially thesis-track students, are encouraged to engage early with faculty whose research interests them to identify their second year advisor and thesis committee chair. Once an agreement has been reached between the advisor and the student, the advisor will assume the role of second year advisor and assist the student in further planning her/his academic program, developing a thesis research strategy, and selecting additional thesis committee member(s). This will culminate in the submission of a thesis prospectus and thesis committee nomination to be submitted to the Graduate Program Advisor by the Friday of finals week in winter quarter of the first year.

If a student has not selected a degree track and second year advisor by the last Friday of the winter quarter finals week in the first year, the student will be placed in the courses-only option in the professional track and will be required to submit the detailed plan of courses within one week.

Satisfactory Progress

"Satisfactory progress" refers to a student's ability to meet the academic standards set by the University of Washington Graduate School and the School of Marine and Environmental Affairs. In particular, students are required to maintain a quarterly and cumulative grade point average of at least 3.0 (B). Students falling below this minimum will be notified by the Graduate Program Coordinator, and, if necessary, a meeting will be scheduled to discuss corrective action. Depending on the situation, students on probation may not be accepted into thesis track or capstone option. Course grades below 2.7 will not count toward graduation.
• **Full-time status.** Some graduate funding sources, for example RA- and TA-ships, require full-time status, which typically is defined as 10 credits during the academic year and 2 credits during summer quarter.

• **Length of Studies.** M.M.A. requirements normally are completed in six or seven academic quarters. (Summer quarter attendance is optional, and generally accelerates progress towards the degree). The Graduate School requires completion of the degree within 6 years from the time the student began the program.

• **On-Leave Status.** To maintain graduate student status, all students must register for credits each quarter (except summer), or go on leave. Students must apply for ‘On Leave Status’, have it approved by the Graduate Program Coordinator, and pay the required fee. This must be renewed each quarter for which leave status is desired. If a student fails to either sign up for credits or go on leave, the student will have to reapply to the Graduate School for admission, and pay an additional application fee.

• **Incomplete Grades.** Students must have completed the required 59 credits at graduation. If any of the required courses have an "Incomplete" grade, a contingency will be placed on granting the degree. Any exceptions to this rule must be approved in writing by the Thesis Committee Chair and the Graduate Program Coordinator.

**General SMEA Policy on C/NC**

The SMEA policy regarding the C/NC option specifies that all core and elective courses be taken for a grade. Exceptions to this policy are decided by the Graduate Program Coordinator on a case by case basis (e.g., the course is offered only on a C/NC basis). Approval to substitute the C/NC option for a grade must be obtained in writing from the GPC at the beginning of the quarter in which the course is offered. Approval will not be granted after the course is completed.

SMEA 550 (Special Topics) may be offered as C/NC at the discretion of the instructor. SMEA 600B, SMEA 650 and SMEA 700 are exceptions to this requirement and may be taken for C/NC. For courses outside of SMEA, students must obtain permission from the Graduate Program Coordinator to take a CR/NC before the start of the quarter in order to count these credits toward graduation. This document must appear in the student’s file.

**Procedures for Academic Dispute Resolution**

The following options are available to students in the event of academic disputes: 1) Talk with the professor or TA involved (this is the first and most appropriate step); 2) Talk with the appropriate advisor or supervisory committee chair; 3) Consult with the GPC; 4) Talk with the SMEA Ombudsman; 5) Talk to the Director. In cases where the student feels it is necessary to go beyond SMEA, contact the University Ombudsman.

**III. Master of Marine Affairs Degree Requirements**

Conferral of the M.M.A. degree depends upon meeting the standards of academic performance established by the University of Washington Graduate School and upon satisfactory completion of the Master of Marine Affairs Degree Requirements. Course descriptions and required prerequisites for the
courses may be found in the University of Washington General Catalog (http://www.washington.edu/students/crscat/smea.html).

Note: Students are responsible for assuring that courses offered outside SMEA meet the intent of the SMEA requirement. Course instructors and content often change, frequently at the last minute, but course numbers and course titles remain the same. Consult the GPC to determine whether a course meets the goals of the SMEA requirement.

A. The Core Curriculum

Core requirements fall in three categories:

I. The Introductory Sequence – SMEA 500, and 502, are taken in the first year of the program. Exceptions to this rule are very rare and require approval of the first-year advisor and the GPC.

1. Introduction to The Human Dimensions of Global Change, SMEA 500 (3 credits)
   
   This course, required for first-year students, introduces students to concepts that form the basis of the SMEA curriculum, including coupled social-ecological systems, resilience in social-ecological systems, human stressors and drivers of change in marine systems, and environmental and institutional responses to change. The accompanying lecture series introduces students to marine affairs problems, opportunities, actors and organizations with emphasis on the PNW.

2. Decision Making and Action Taking in Marine Affairs, SMEA 502 (3 credits)
   
   This course, required for first year students, focuses on decision-making, action taking, implementation, evaluation and adjustment in response to problems that emerge within the HDGCME framework.

II. Core Areas of Knowledge and Skills

3. Environmental Equity and Justice (3 credits)

   Environmental equity and justice manifest themselves differently in local, national, and international realms. This requirement offers students a choice of examining environmental equity and justice concerns in various arenas, each with distinct intellectual lineages and histories, overlapping concerns, and recent fruitful cross-pollination by scholars working across two or more fields.

   Currently there are five SMEA 550 topics courses approved to satisfy this requirement, however others may be added:

   Critical and Imaginative Restoration Ecologies (3 credits) Offered Fall 2019
Ocean Political Ecology in an Uncertain Time (3 credits) *Offered Winter 2020*
Environmental Justice and Political Ecology Field Course (3 credits)
Participatory Research Practicum (3 credits)
Justice, Sovereignty, and Equity Along the Shore (3 credits)

4. **Marine Law (3 credits)**

   The law requirement is designed to give students exposure to a body of legal principles developed through treaties, statutes, and/or judicial and administrative decisions affecting a specific marine affairs topic. U. S. Ocean and Coastal Law, constrained to a significant extent by the International Law of the Sea, provides the basis for most of the policies that are applied within the U.S. Exclusive Economic Zone and the coastal zone.

   - The course that meets the Law requirement is:
     SMEA 515 U.S. Coastal and Ocean Law (3 Credits)

5. **Policy Analysis (3 credits)**

   The purpose of this requirement is for students to be exposed to the various theories and tools of policy analysis (e.g., cost/benefit analysis, feasibility study, forecasting) and how those tools are applied by practitioners.

   - The course that meets this requirement is:
     SMEA 519. Marine Policy Analysis (3 Credits)

6. **Economics Requirement (3 credits)**

   The SMEA economics requirement assures that SMEA students understand the basics of microeconomics in application to marine policy. SMEA students may satisfy their economics requirement in two ways.

   SMEA 536. Applied Microeconomics for Marine Affairs (3 credits)

   FISH 561. Resource Economics for Management & Policy (4 credits)
   This class is taught in SAFS, Autumn 2019.

7. **National and International Policy Processes (3 credits)**

   The Policy Processes requirement provides students with an understanding of the dynamics that drive policy formulation, adoption, and implementation at various levels. An explicit analytical approach is used to study the how, why,
and what of policy processes at the state, national, or international level. Any of the following courses fulfills the requirement:

SMEA 521. Climate Change Governance (3 credits)

_The following course also satisfies this requirement but will not be offered until Autumn 2021:_

SMEA 507. International Organizations and Ocean Management (3 credits)

---

8. **Marine Science Requirement (3 credits)**

The objectives of the science requirement are to familiarize SMEA students with the physics, chemistry, and biology of the ocean; with hypothesis-testing approaches as they are used in marine research; and with methods of data collection and analysis for marine research purposes.

The basic science course for SMEA students who do not have a strong undergraduate background in oceanography and marine science is:

SMEA 591. Marine Science in the Coastal Zone (3 Credits)

---

9. **Research Methods Requirement (3 credits for professional track; 6 credits for thesis track)**

The research methods requirement ensures that SMEA graduates are able to apply intermediate level statistics (required). In addition, students are encouraged to take courses in advanced statistics, qualitative research methods, research design, or professional skills.

All students are expected to demonstrate a minimum level of competency with respect to quantitative (statistical) analysis. This level of competency can be met with an upper-division undergraduate course in statistics. The required skill level is equivalent to intermediate statistics, including an understanding of point estimates, confidence intervals and regression equations. Students not meeting this requirement through undergraduate courses prior to admission to SMEA will be required to take one appropriate course in their first or second quarter at SMEA. Students who have completed such a course prior to enrollment in SMEA are encouraged to take more advanced courses in quantitative or qualitative research methods and design.

SMEA 584. Statistics for Policy Analysis (3 Credits).

Offered in Autumn 2019.

Alternate recommended courses include:

Students may also select an appropriate course from the Center for Statistics and the Social Sciences (CS&SS), with approval.

Thesis-track students have higher requirements for research methods given the research focus of the thesis project. Depending on faculty availability in any given year, SMEA offers a variety of such courses. They include: Interviewing Skills (SMEA 512), Case Study Method (SMEA 581), Research Design (SMEA 583), R coding (SMEA 550), Collaborative Research Practicum (SMEA 550), and others to choose from departments across campus. Students are advised to discuss the above options with their faculty advisors and select their methods courses in consultation with the thesis committee chair.

Many other skills are of value to policy professionals, such as planning, budgeting, mediation and negotiation. SMEA students are encouraged to pursue such professional skills through the electives they take elsewhere on campus.

10. Marine Affairs Advising (2 credits)

SMEA 600 B. First year advising (1 each, autumn and winter quarters for first-year students)

Waivers for Core Courses

No substitutions are permitted for required courses in the Introductory Courses (SMEA 500 and 502). Permission to defer either of these courses until the second year of study must be approved by the GPC.

In each of the core areas of knowledge, each student must satisfy the graduation requirement by taking one or more courses covering the subject while enrolled in SMEA. Students with little or no background in a subject area will satisfy the specified requirements with a basic course covering the fundamentals of the subject. Students with a stronger academic background in the subject (e.g., significant exposure to the subject as an undergraduate) can fulfill the subject area requirements by taking a more advanced course. For example, a student with little or no marine science background will take the introductory course SMEA 591, while a student with a stronger marine science background will choose from a number of more advanced marine science courses.

Waivers for core requirements are provided only if a student can demonstrate substantial prior coursework in a topic area and that additional coursework would be redundant. In special cases, a student with a strong background in a subject area may seek a waiver of that graduation requirement. For example, a student holding a law degree could seek waiver from the law requirement. We distinguish between waiving requirements for specific courses (e.g. SMEA 519 or 591) and waiving the obligation to take courses in a specified category (e.g. Policy Analysis, or Economics).
In no case can waivers be used to reduce the total number of credits required for graduation. Requests for waivers are to be submitted to the faculty listed below and decisions are to be made by them. Any changes must be recorded in writing by and placed in the students’ files, along with the necessary transcripts.

**Marine Law:** Ryan Kelly  
**Policy Analysis and Policy Process:** Nives Dolsak  
**Marine Science:** Terrie Klinger  
**Economics and Intermediate Statistics:** Sunny Jardine  
**Environmental Equity and Justice:** Cleo Woelfle-Erskine

**B. Electives (21-30 credits for professional track, 12 for thesis track, or the number required to bring total credits to 59)**

Elective courses are intended to enhance the student's knowledge of Marine Affairs in areas pertinent to the student’s research and career goals. Electives provide the needed depth of understanding in substantive fields of inquiry and in methods of research and analysis. At least 6 credits from 2 courses must be taken from the SMEA curriculum. For the list of SMEA courses, see [http://www.washington.edu/students/crsct/smea.html](http://www.washington.edu/students/crsct/smea.html) (some courses may not be offered regularly so check with the GPA or GPC). While the same course may not be used to satisfy both elective and core requirements, any SMEA course not used to satisfy a core requirement will qualify for elective credit. Independent Study (up to 8 credits of SMEA 600) may be used to satisfy the elective credit requirements, but NOT the 6 credits of SMEA electives.

Elective credits must qualify as graduate credit (typically 400 or 500-level courses) offered in any UW department or school. Students should consult with their faculty advisors or thesis committee chairs in choosing elective courses. Other 400 or higher level courses offered at the University of Washington will qualify for graduation credit so long as the course is pertinent to the student's area of study. As a general rule, students should discuss the choice of elective courses with their faculty advisor and the Graduate Program Coordinator. Additional advice on elective course offerings can be sought from faculty advisors, thesis committee chairs, and the Graduate Program Coordinator.

**C. Independent Study Courses (SMEA 600A)**

Students may use independent study (SMEA 600A) to explore topics that have relevance to their course of study but for which no organized course exists. SMEA 600A credits may not be used for preliminary thesis research or preparation of the prospectus. To enroll in SMEA 600A students must have faculty approval to register, using the SMEA Independent Study Agreement form. Receipt of credit is contingent on completion of work products agreed to in advance. No more than 8 Independent Study credits (600A).

Note that while graduate-level independent study is a flexible category at the University of Washington, expectations and products or deliverables should be clear between faculty supervisors.
and students before the Independent Study Agreement is signed. Students may receive “I” (incomplete) grades if expectations are not met by the end of quarters during which Independent Study is elected and ultimately loss of the credits if the expected work is not completed. The University’s rule of thumb is that 1 independent study credit equals 3 hours per week of work.

SMEA 600B credits are limited to a total of 2, one in each of autumn and winter quarter of the first year, and are devoted to advising.

**D. Professional Track**

Students in the professional track take one of two paths to the degree: a course of study that includes additional course work (9 credits) or completion of a capstone project (9 credits). Students interested in a team capstone project should indicate their interest to faculty capstone advisor by December 13th, then submit a project management plan to the Graduate Program Advisor (GPA) by the Friday of winter finals in their first year. If this deadline is missed the student will be re-assigned to the courses-only track. Capstone students will typically register for 9 credits of SMEA 650 in their second year but are eligible to enroll in spring or summer of the first year if the project requires it. If students wish to extend their capstone experience beyond the 9 credits required, students may (with the approval of the capstone faculty advisor) enroll in SMEA 600 A or B credits for this purpose. Students are required to give a formal presentation of their capstone research to the SMEA community in addition to any presentation that the capstone client may require. Approval from the faculty capstone advisor is necessary before the SMEA presentation can be scheduled. Capstones in Arctic or Canadian Studies topics may be eligible for the FLAS. If interested, contact the Associate Director in autumn quarter to inquire if any such capstones are being considered. Students may also initiate their own capstone with the agreement of a faculty member willing to serve as the capstone advisor and by obtaining the minimum number of participating students. This process must happen prior to the capstone presentations on November 15th.

Students who wish to complete the degree by taking additional course work must submit a brief justification explaining how the courses-only approach will help them meet their career goals. This must be submitted to the GPA by December 13th of the first year, followed by a detailed plan, approved by the first year advisor, of additional course work no later than the Friday of finals week, winter quarter of their first year. The plan for additional coursework must specify:

1) The content/topics the student wishes to learn; how those topics contribute to the student’s career goals; a list of courses and departments that offer them.

2) The analytical skills the student plans to acquire; how those skills contribute to the student’s career goals; a list of courses and departments that offer them.

3) The professional skills the student plans to acquire; how those skills contribute to the student’s career goals; a list of courses and departments that offer them.

A word of explanation is necessary relative to the requirement for 9 additional credits of study in lieu of a capstone project or thesis. The Graduate School requires that different paths to the same degree be distinct from each other and that there be equity in the requirements of each relative to the other. Equity in the additional course work option vis-à-vis the capstone and thesis requirement lies in the
additional advanced courses pertinent to each student’s professional objectives. These courses amount to nine credits.

Both of the above options within the professional track require that students complete a total of 59 credits and be enrolled in a minimum of 2 credits in the quarter in which they graduate.

E. The Thesis and Thesis Presentation (15 credits – for thesis track students)

Conferral of the M.M.A. Degree for students in the thesis track depends upon satisfactory completion of a research project presented in thesis format and prepared under the supervision of a thesis committee.

While doing thesis research the student is required to take 15 credits of SMEA 700.

SMEA 700. Master's Thesis Research (15 Credits)

Prerequisite: A thesis prospectus must be approved by the student’s thesis committee chair prior to enrollment in SMEA 700. Only 15 SMEA 700 credits will count towards the MMA degree, independent of the number of credits of SMEA 700 actually taken.

Students are required to give a formal presentation of their research to the SMEA community. Approval from the chair of the student’s supervisory committee is necessary before the presentation can be scheduled.

Thesis Process The SMEA thesis is a significant paper communicating the results of research and analysis of a problem or opportunity. Some theses attempt to explain and/or predict phenomena important to marine or environmental affairs (the scientific thesis). Others seek to identify policy issues, adopt an approach to policy development or evaluation, and make recommendations (the policy analysis thesis). Still others provide a detailed description and explanation of a marine or environmental affairs issue, problem, or case study, but do not attempt either to predict or evaluate (the descriptive thesis). Appropriate models for such a paper appear in peer-reviewed professional journals, and students are encouraged to consult such journals to determine scope, length, and style appropriate to the discipline. In some cases, students may choose to produce a thesis that does not conform to the constraints of a journal publication. Such a thesis must meet the same standards of academic excellence as the traditional thesis, and it must involve sufficient documentation to satisfy Graduate School requirements. An acceptable thesis

* demonstrates independent thought and research,
* contributes to understanding or potential resolution of a problem in marine or environmental affairs, and
* communicates effectively to a relevant audience.

Thesis Prospectus

Students pursuing the thesis track will 1) choose a thesis committee chair from among the eligible SMEA faculty; 2) work with the chair to identify a research topic; 3) choose one or more thesis committee member(s); and 4) formulate a written prospectus that specifies the hypothesis or research question to be addressed, the research methods to be used, and the anticipated time-line for completion.
of the research. The student's Thesis Committee Chair must approve the thesis prospectus by the final
day of winter quarter in students’ first year. If that deadline is missed the student will be re-assigned to
the courses-only track. Once the prospectus is approved, students are eligible to enroll in SMEA 700.
Registration must be authorized by the Chair, using SMEA Thesis Credit Approval Form every quarter
a student enrolls in SMEA 700. A minimum of 15 credits of SMEA 700 is required and can be
distributed over several quarters. Approval or exemption by the Institutional Review Board (IRB) or
the Human Subjects Division (HSD) may be required for students to carry out their research. Students
should discuss this possibility with their thesis advisor and consult the following website:
http://www.washington.edu/research/hsd/ to determine if a Human Subjects approval or waiver is
necessary. If documentation is required students are to complete all of the requisite paperwork and
provide a copy of the prospectus and approval to the Graduate Program Advisor upon receipt.

Thesis Supervision
Supervision of the student's thesis preparation is the primary responsibility of a committee composed
of a Chair (or Thesis Advisor) and at least one committee member. The Chair and at least one-half of
the total membership must be members of the Graduate Faculty. At least one of these committee
members must be formally associated with SMEA as a regular, affiliate, adjunct, or research faculty.
The Chair will assist students in recruiting members to the committee whose expertise will contribute
to the design and execution of the thesis research. All committee members are required to hold an
accredited Ph.D. or J.D. to serve on the thesis committee. In rare cases where a potential member does
not hold one of these degrees, but has what the thesis chair deems to be equivalent expertise and
experience in a particular subject matter pertaining to the thesis topic, a petition may be submitted to
the Graduate Program Coordinator (GPC) for review. The GPC will then determine if the potential
member is qualified to serve as either a second or third member of the committee, or not at all. If the
petition results in third member approval, another member of the UW Graduate Faculty will need to be
added to the committee as a second member in order for the approved third member to serve.

Once the committee members have been established, a committee nomination form must be signed by
all members and submitted to the Graduate Program Advisor. The GPA will then submit the names of
the student’s committee members to the Graduate School. Any changes made after the initial
nomination will require immediate notification to the GPA. The committee will continue to meet with
the student as needed until completion of the thesis.

Thesis Presentation
A student will present his/her thesis results to the SMEA community during the fall, winter, or spring
quarter presentation dates. The presentation dates will be determined at the beginning of the year and
announced as early as possible so that every effort can be made by the student’s thesis committee to
attend the presentation. If physical attendance is not possible we strongly encourage attendance using a
live stream or virtual meeting program.

Thesis Submission
At the time of degree completion, the student must be enrolled in a minimum of two credits or make
use of the registration waiver which grants the student an additional two weeks past the quarter end
date to make final edits and submit the thesis. The UW Graduate School requires electronic submission of theses via the UW Electronic Thesis/Dissertation (ETD) Administrator Site http://www.grad.washington.edu/students/etd/. The final approved thesis must be submitted no later than 11:59 pm PST on the last day of the quarter or on the 14th day following the end of the quarter with use of the registration waiver. Guidelines for writing and the submission of the thesis can be found at the following website http://grad.uw.edu/for-students-and-post-docs/thesisdissertation/. As a part of the thesis submission process, the signed Supervisory Committee Approval Form should be uploaded to the UW ETD Administrator site when submitting your thesis, and the warrant and a copy of the thesis turned into the Graduate Program Advisor for the department.

IV. Options

A. Certificate Programs & Concurrent Programs

Several graduate certificate programs and concurrent graduate degree programs are available to SMEA students. Graduate certificate programs generally require 17-22 credits and the overlap of coursework applied towards both programs must not exceed 6 credits. Students should review Graduate School’s Memo 43 to ensure all requirements are met.

Certificates that may be of interest to SMEA students include the following:

Department of Philosophy
- Graduate Certificate Program in Ethics

Evans School of Public Policy and Governance:
- International Development Policy and Management Certificate
- Nonprofit Management Certificate

Program on Climate Change:
- Graduate Certificate in Climate Science

Center for Humanities:
- Certificate in Public Scholarship

Interdisciplinary Science, Technology and Society Studies:
- Certificate in Science, Technology and Society Studies

Students pursuing a concurrent graduate degree in another UW graduate school have to meet graduation requirements in BOTH schools as outlined in the UW Graduate School policy for Informal Concurrent Degree Programs: “To earn two master’s degrees, a student must fulfill Graduate School degree requirements for EACH degree for a minimum of 72 credits. If one or both of the individual programs require more than the minimum of 36 credits, those additional credits may be ‘shared’ and applied to both degrees. However, the total number of credits must be at least 72 and BOTH programs must approve the shared credits counting toward both degrees. Theses and thesis credits may not be
2019 MMA DEGREE REQUIREMENTS CONTINUED

“shared.” (Graduate School Memo 35)

Students must receive SMEA approval for the “shared credits”. To initiate approval of the “shared credits” in SMEA, students follow the procedure outlined in the Program of Studies for non-SMEA electives and/or for obtaining waiver of a course requirement in the “Core Areas of Knowledge and Skills”.

See the Graduate School’s Memo 35 online for all concurrent degree program requirements.

Past SMEA students have completed informal concurrent degrees in MMA and one of the following:

- Master of Mechanical Engineering
- Master of Public Administration
- Master of Urban Planning
- M.Sc. in School of Aquatic and Fishery Sciences
- M.Sc. in Oceanography
- Juris Doctor of Law

SMEA has a formal concurrent degree with the Jackson International School. For details please see the Graduate Program Advisor.

There is more information on the graduate certificate programs and concurrent graduate degree programs in the SMEA student binders and on the SMEA website.

B. Foreign Languages

There is no foreign language requirement for the M.M.A. degree. In cases where the special interests of students concern specific areas of the world (e.g., the Far East, South America), competence in a foreign language may be essential. The need for a foreign language will be determined by the student's supervisory committee.

Competency in spoken and written English is essential to successful completion of the Program of Studies.

C. Internships

Practical experience can be advantageous to professional development. With permission, independent study credit hours may be earned during an internship assignment by arranging an SMEA 600 independent study project under the supervision of an appropriate faculty member and with written approval of the Graduate Program Coordinator. Additional work and deliverables beyond the internship itself are required to obtain course credit, and internships should be carefully selected to contribute to the student's research and professional career goals. Students interested in internships are encouraged to seek paid internships.
